Abstract (en)

[origin: FR2891591A1] The device has a gas inlet orifice (e1) and a gas outlet orifice (s1) emerging out on one plane. An inlet orifice (e2) and an outlet orifice (s2) emerge out on another plane. A rotating cylindrical part (3) is provided between the two planes, for permitting a circulation of exhaust gas recirculation (EGR) gas in one direction and in a reverse direction. The part (3) rotated around its revolution axis and has end faces provided with respect to the planes. The part (3) defines recesses communicating with the orifices (e1, s1, e2, s2) and is controlled by an actuator.
