Abstract (en)

[origin: WO2007038909A1] The invention relates to a link plate (4) and a plate link chain for a vehicle drive, comprising a plurality of chain links which are connected together in an articulated manner by means pressure parts (2). Said pressure parts extend in a transversal manner in relation to the longitudinal direction of the link chain. Bearing surfaces are embodied on the pressure pieces and chain links, along which the pressure pieces and the chain links are placed on top of each other in order to transmit power. The respective bearing surfaces have an optimum shape.
