Abstract (en)  
[origin: FR2891354A1] The reservoir (1) has a carbon dioxide snow receptacle comprising a perforated zone (3) at upper surface for evacuating the gas generated inside the receptacle. A lid (2) is integrated to the upper surface of the receptacle in a way to allow a space between the upper surface of the receptacle and lid for accumulation of the generated gas. The receptacle has an opening (5) on front lateral surfaces, which is communicated with the space and adapted to co-operate with an external unit for evacuating the generated gas.
