Abstract (en)
[origin: WO2007027608A2] A system receives yellow page data, map provider data, and document data in response to a local search query, and geocodes the data to assign a geographic identifier and to match at least one address associated with the local search query. The system also indexes the geocoded data to determine business information and location information associated with the local search query. The system further provides local search results and a map based on the indexed data.
