Abstract (en)

[origin: WO2007042015A1] The invention relates to an installation for monitoring the manual transfer of goods provided with identification carriers, by means of a reading appliance which is operated by a user and used to read the identification carrier in a non-contact manner, and an identification data memory. Said reading appliance comprises a fixing device by which means it is fixed to the body of the user, and a trigger device by which means it can be freehandedly triggered by the user in order to initiate a reading process.
