Abstract (en)

[origin: EP1935512A1] The device has a container (1) limited by a wall (3), which has upper, lower and lateral edges (4-7), where each edge has a material thickness (8) to form a housing (L) for a towelette constituted of a microfiber weave. The housing has slots (14a) and recesses (14b) favoring air flow inside the housing, where the slots are arranged in the thicknesses of the edges (4, 5). The slots balancing relative to each other on the edges (4, 5) are rejoined by the recesses to accelerate drying of the towelette after utilization. The recesses support the thicknesses of the edges (4, 5). The device is made of metal or plastic material.
