Abstract (en)

A facility decontamination system has at least one nozzle (10) permanently sited within the facility (12), a liquid aerosol dispenser (14) located outside the facility and means (16) for coupling the external liquid aerosol dispenser (14) to the nozzle (10). The liquid aerosol dispenser means (14) has a reservoir containing a liquid decontaminant and propellant means (16) for expelling the liquid decontaminant from the reservoir means through the nozzle (10) into the facility (12). The decontaminant is preferably sprayed into the facility (12) as a dry fog and is subsequently evacuated.
