Abstract (en)
[origin: EP1935572A1] The hand guided tracker (10) has a traveling nut (78), which is guided slide on the threaded spindle (76) in axial-rotation secured manner. The traveling nut is controlled by a control unit (23) of the motor (71) to move, to and fro between a two end positions. The traveling nut is displaced in a clamping cycle from an end position to another end position to displace the drive spring element (31) in the clamping position, and the traveling nut is displaced subsequently from the later end position again back to the former end position.
