Abstract (en)

[origin: EP1935742A1] A rail vehicle's freight wagons are constructed from two head segments (2,2') and a center segment (3) fitted between these head segments. Head segments each have frames (4,4') supported on rail running gear (1,1') and flange surfaces that are linked to the frames via welded structures (5,5'), aligned vertically to the rail vehicle's longitudinal axis and oriented towards the center segment on the rail vehicle.
