Abstract (en)
The system has a track section including two rail sections (1) that are spaced horizontal from each other. A lifting device (2) is arranged between the rail sections. The lifting device is horizontally displaceable between the rail sections, and guided along a track longitudinal direction. A guiding device is arranged between the rail sections and functionally connected with the lifting device. The guiding device has an immersion (3) that runs along the track longitudinal direction. A conveyor is movable in the immersion and fastened to the lifting device.
