Abstract (en)
[origin: EP1935795A1] The transport frame (1), for the shipment of automobile components, has a rectangular base group (2) with the outer contour defined by a longitudinal strut with two lower lateral struts. Two channels are for the tines of a forklift truck. Two side frames (3) are over the lateral struts. The lower lateral struts are shaped into a step or a U-shape to give a free space so that, when stacked, part of the side frame can pass into the free space of the frame over it.
