Abstract (en)

[origin: EP1935824A1] The method involves connecting the floor terminal (2,2',2'') with a group control for communicating a prompted floor call. An elevator is controlled by the group control according to the communicated floor call. A call detection unit for communicating a prompted call is connected with the group control. A new floor terminal is mounted at a floor for prompting the floor call and connected with the call detection unit for communicating a prompted call. An independent claim is also included for a system for modernizing an elevator facility with several elevators in a building.
