Abstract (en)

[origin: EP1936014A1] The block has a pivoting selector (9) comprising a mobile armature (13) with a flat surface (13A) placed against a stop surface (4A) of a fixed armature of a control electromagnet (4). The electromagnet has poles (61, 62) emerging from a stop plate (8) of the surface. The plate has a portion (82) projecting with respect to a main portion (81) of the plate and to the poles. The portion (82) is placed near the pole (62) to receive an end (132) of the armature (13) corresponding to the pole (62), and the portion (81) receives an opposite end (131) corresponding to the pole (61). An independent claim is also included for a device for electromagnetically selecting movements of a dobby jack.
