Abstract (en)

[origin: EP1936025A1] The woven fourdrinier, for paper/cardboard web production, has at least two woven layers with the upper layer (G1) in contact with the web and the lower layer (G2) in contact with the production machine. The layers are locked together by bonding warps (sBK). The upper layer has at least 26 different warp structures with wefts in a maximum float length of three. The bonding warps provide surface warp structures with change points (A) to the other layer.
