Abstract (en)  
[origin: EP1936076A2] The self-locking panic lock for a door has a movable slide (8) interacting with a locking bolt (3), and a spring-loaded control element (5) which fixes the locking bolt in a locked position when it is retracted into the lock housing (1). The lock has a sprocket (9) which has a dog (21) which operates the slide. Two independent locking cylinders (18,19) are available for operating the slide, of which at least one, by means of a blocking device, can be selectively locked or unlocked.
