Abstract (en)

[origin: EP1936319A1] Penetration bullet comprises a component having two parts (AWM, M) made from materials of different thicknesses. An independent claim is also included for a method for the production of a penetration bullet. Preferred Features: The component is in the shape of a rod or plate. The two parts of the component are arranged axially behind each other in the spreading direction of the detonating charge. The part (M) has a higher material density than the subsequent part (AWM).
