Abstract (en)

[origin: EP1936715A1] An organic light emitting display device and a method of fabricating the same, in which the transmittance is substantially the same in a wavelength band of visible light. The organic light emitting display device includes: a substrate (200); a first electrode (210) disposed on the substrate (200) and including a reflection layer; an organic layer (220) disposed on the first electrode (210) and including a white emission layer; a second electrode (230) disposed on the organic layer (220); a transmittance controlled layer (240) disposed on the second electrode (230); and a metal layer (250) disposed on the transmittance controlled layer (240).
