Abstract (en)

[origin: WO2007045352A1] The invention relates to a transdermal therapeutic system for administering lipophilic pharmaceutical substances which are water-soluble and/or exhibit a low cutaneous permeability. The inventive method consists in introducing an active substance into a multi-component enhancer system consisting of four components, wherein each system component is selected from substance groups comprising a) terpene, b) cyclic glucitol ethers, c) carpin, capric and/or linoleic acid medium chained triglycerides and d) long-chained alcohols containing 8 or more carbon atoms.
