Abstract (en)
[origin: WO2007046609A1] A truck for a skateboard has a shaft mounted thereto. The shaft has wheels coupled to both ends thereof. A coupling part having a through-hole is projectedly formed in one side of a middle portion of the shaft, and a support part is projectedly formed on the other side of the middle portion of the shaft. The truck is formed of a plate- shaped member in a manner such that both ends of the plate- shaped member are bent to face each other and define center arms. The coupling part is locked to one center arm by a connector, and the other center arm has a pocket defined therein so that the support part can be inserted into the pocket with an elastomeric element coupled in the pocket.
