Abstract (en)

[origin: FR2889969A1] The simulator has an aerodynamic vein (2) comprising a lateral wall constituted of a flexible material film in the form of a cylindrical or slightly conical tube. The flexible film is held between two end frames positioned at base and top ends of the vein. The flexible film connects the frames to a superstructure (5) whose rigid elements are moved away from the lateral wall, where the superstructure maintains the end frames in correct position.
