Abstract (en)

[origin: WO2007045778A1] The invention concerns a motor vehicle ventilating device comprising at least one ventilating duct (2) adapted to be connected to a ventilation unit for conveying air into the duct and adapted to be connected to an inlet (4) which emerges into the vehicle passenger compartment. The duct (2) comprises an air circulating pipe (10) and a blind cavity (12) whereof the mouth (14) is placed substantially perpendicular to the axis of the pipe. The invention also concerns a motor vehicle instrument panel comprising at least one central ventilation inlet (4) emerging into the passenger compartment, the ventilation duct (2) being arranged substantially at the center of the instrument panel and being connected to said inlet (4). The invention also concerns a vehicle comprising such a ventilating device which an acoustic device of the vehicle.
