Abstract (en)

[origin: WO2007036496A1] A method for preparing aminodiglycol (ADG) and morpholine by reaction of diethyleneglycol (DEG) with ammonia in the presence of a transition metal heterogeneous catalyst is characterised in that the catalytically active mass of the catalyst contains, before treatment with hydrogen, oxygen-containing compounds of aluminium and/or zirconium, copper, nickel and cobalt, and in that the catalyst moulding in pellet or strand form has a diameter of < 3 mm, in tablet form a height of < 3 mm and in all other geometrical shapes an equivalent diameter $L=1/a'$ of < 0.70 mm, a' standing for the external surface per volume unit (mm^3/mm^2).
