Abstract (en)

[origin: WO2007045289A1] The invention relates to a method for operating a textile machine (1) comprising a plurality of working stations (2), said working stations (2) comprising interchangeable components which are respectively provided with a readable and writable transponder (37) arranged thereon or integrated thereinto. During the life cycle of the interchangeable components, at least the operating data which influences the state of wear of the interchangeable components and can be recorded during the period of use thereof can be automatically stored on the respective transponder (37).
