Abstract (en)  
[origin: WO2007042265A1] Disclosed is a disk brake, particularly for a utility vehicle, comprising a caliper (1) that is fastened to a brake support and is provided with a receiving chamber (15) for a clamping mechanism as well as a brake disk (2') which can be effectively connected to brake shoes (2). The disk brake further comprises a retaining clip (4) which is removably fastened to the caliper (1) while supporting springs (3) that act upon the outer edge of the brake shoes (2). One end of the retaining clip (4) positively lies in a receptacle (8) of the caliper while the other end thereof is retained by means of a fastening element (5). The inventive disk brake is configured such that the fastening element (5) is fitted with two legs (10) which extend at a distance from each other and are locked in holes (7) located in the caliper (1) on both sides next to the retaining clip (4).
