Abstract (en)  
[origin: EP1938928A1] A guide device (30) of a screw feeding device (20) has a guide member (31) defining a guide path for the movement of a screw strip (J) into a feeder (22) that can reciprocally move in a screw driving direction. A clearance (31e) is provided between guide portions (31a) of the guide member (31), so that the screw strip (J) can be positioned to extend across the clearance (31e) and can move along the clearance (31e) as the position of the feeder (22) changes.
