Abstract (en)

[origin: EP1938934A2] The method involves discharging a grit (2) that is discharged from a grit silo (13) in a chute (3), by a discharge device. The grit is allowed to strike on an equalizing area (8) with a length ranging from 1 to 4 meter, of a roller carpet (14), after discharge from the grit silo into the chute. The equalizing area does not have a strewing effect, and the grit is transported. The grit is transferred to a scatter area (9) of the roller carpet. The grit is distributed on a length ranging from 0.5 to 8 meter, of a form strap (6).
