Abstract (en)

[origin: EP1938984A2] The device has an application unit (1) for an image moderate coating of printing sheet with an adhesive. A coating module (2) for transmission of image producing layers from the carrier foil to the printing sheet in a transfer gap (6) between an impression cylinder (4) and a press roll (3). The coating module has a device for guiding of a foil web of the transfer foil (5) to the transfer gap and vice versa. The coating module is attached to the application unit such that the coating module is provided at any places of a printing machine that processes the sheet, which receives the module.
