Abstract (en)  
Method for making a container (100) in a multilayer material (1) for pourable products having at least one breakable portion (5) suitable for being removed before pouring said pourable product out of said container (100), comprising the phases of: a. coupling at least one sheet-like layer in cardboard (3) to at least one sheet-like layer in polyethylene (4) to form said multilayer material (1), and b. erecting said multilayer material (1) to form said container (100), said at least one cardboard layer (3) being arranged on the outer side of said container (100). The method contemplates that said phase a) of the method is preceded by the phase of perforation of said at least one sheet-like layer in cardboard (1) in correspondence to said at least one breakable portion (5) and that said phase b) of the method is preceded by the phase of integrally coupling, directly or indirectly, at least part of a removable sheet-like body (8) to said at least one sheet-like layer in polyethylene (4), in correspondence to said at least one breakable portion (5), said at least one removable sheet-like body (8) being placed on the outer side of said multilayer material (1).
