Abstract (en)
[origin: EP1939095A1] The machine has a stationary frame (3) including a rotating table for conveying containers (1). A labeling module (13) is removably arranged at or on the frame, where the labeling module labels the containers which run along with a rotating table located on the labeling module. A motor (M4) of the labeling module is designed in such a manner that the motor remains at or on the frame during exchange and/or change of the labeling module. The motor of the labeling module is detachably arranged over a carrier frame at or below the frame.
