Abstract (en)  
[origin: EP1939096A1] The assembly (A) has a rotatably driveable pallet shaft (6), which bears a pallet (7) coordinating with a label format, and a rotatably driveable gripper cylinder (9), bearing grippers (11) coordinating with the format. A labeling container (4), the pallet and the gripper cylinder are main components, which are convertible for format change. The components define a labeling-transfer path and co-operate with each other, where one of the components is convertible for the format change by a manual or motor co-operating position change within the assembly.
