Abstract (en)  
A crane (1) in which the sway of a lifter (spreader) (9) or a lifted load (container) can be stopped (suppressed) in a short period of time, the positioning of the lifter (9) or the lifted load can be carried out easily and quickly, the operability of the crane can be improved, and shortening of the loading and unloading time can be achieved. The crane (1) is provided with a lifter that holds plural loads (22,23), there is provided an actuator (15) that is able to change a relative position between the lifted loads (22,23), and by driving the actuator (15) according to a deviation from the target position, the lifted load (22,23) or load holding part of the lifter (9) can be positioned on a target position.
