Abstract (en)

[origin: EP1939223A1] To provide a method for producing a melt-processable fluororesin, which is capable of increasing the molecular weight of the fluororesin and preventing coloration of the fluororesin, by using a specific fluorinated emulsifier other than ammonium perfluorooctanoate. A method for producing a melt-processable fluororesin which is characterized in that a fluorinated monomer is emulsion-polymerized in an aqueous medium containing a fluorinated emulsifier of a formula (1) $XCF_2CF_2(O)mCF_2CF_2OCF_2COOA$ wherein X is a hydrogen atom or a fluorine atom, A is a hydrogen atom, an alkali metal or NH_4 , and m is an integer of 0 or 1.
