Abstract (en)
[origin: EP1939440A2] The valve (1) has a servo control loop (40), and a magnetic valve (20) arranged in a valve housing (2). The magnetic valve controls an amount of fuel, which is injected through a nozzle outlet (15), using the servo control loop. The magnetic valve blocks connection of flows (34, 35) of the servo control loop with return movement, in a position. The magnetic valve releases the flows in another position, and releases the flow (34) and blocks the flow (35) in a third position.
