Abstract (en)

[origin: EP1939528A1] The deflector has a plate i.e. portion of conical surface, rotating around an axis of cone (300), where the plate has a concave surface (62) and a convex surface (64). The plate has a contour that includes four sides (72-78), where two sides (72, 76) i.e. arc of circles, are centered on the cone axis. Two sides (74, 78) e.g. cone generating segments, connect the sides (72, 76). A central zone surrounds a hole and a peripheral zone surrounds the central zone, where the central zone has a flat face from a side of the concave surface. Independent claims are also included for the following: (1) a combustion chamber comprising a deflector (2) a turbojet engine comprising a combustion chamber and a deflector.
