Abstract (en)
[origin: EP1939530A1] The device has a connecting piece (12) staying in connection with a channel (15) for the supply of fresh air, where an isolation valve (17a) is inserted into the channel. Another channel (16) is inserted into the channel (15) in a flow direction of the fresh air and behind the isolation valve for the suction of a room air. The channel (15) is equipped with another isolation valve (16a). Another connecting piece (11) is connected with an upward directed channel (13) for the delivery of heated air, where the upward directed channel is equipped with an isolation valve (13b).
