Abstract (en)
A modular refrigeration apparatus is described comprising a refrigeration device provided with a refrigerating circuit of frost-free type (100) and at least one thermally insulated external container (200), separated from said refrigeration device (100, 300) and capable of containing food to be refrigerated. The container (200) comprises a first (3) and a second (4) port and the refrigeration device comprises at least one opening (102) for the emission of cold air into the inside of the container through said first port (3) and at least one other opening (103) for the aspiration of air from the container through the second port (4). The apparatus includes connecting means (150) between the openings in said refrigeration device and the ports on at least one container.
