Abstract (en)
The device has a drive pinion with a contrate toothing secured directly or indirectly to a control stem, where the control stem is secured to a control button (15). A rack with a toothing meshes with the drive pinions. A rotation of the control button positions the end of a driven arm of a lever opposite a function corrector and set of applications of pressure on a pusher (10) activates the selected function, or alters the selected function, or activates and alters the selected function by causing movement of the rack.

Abstract (fr)
Le dispositif comprend un unique organe de commande extérieur comportant un poussoir (10) dont la tête (11) et le tube (13) sont assemblés de part et d'autre d'un bouton de commande (15) qui permet de manoeuvrer une crémaillère (35). Une bascule (45), pivotée à une extrémité de la crémaillère (35) a son bras menant (49) en appui sur le tube de poussoir (13) et son bras mené (51) positionnable en regard d'un correcteur déterminé (9a) correcteur (9a) par rotation de la bascule (45). Une ou plusieurs pressions sur le poussoir (10) permettent d'activer ledit correcteur (9a) par rotation de la bascule (45).
