Abstract (en)  
[origin: DE102005047353A1] The tool has a drive unit (10) and a gear unit (11), where the drive unit is supported on an intermediate flange and is provided for driving of a drive train with a toothed shaft (14). The flange is divided into drive end and gear end bearing bracket units (12, 13), where the units are connected with each other by a vibration damping unit (15). A compression spring or a flat spring is used as the damping unit. The bracket units are arranged in housing part shells (16, 17) that are connected by an elastic seal (18).
