Abstract (en)
[origin: WO2007048948A1] The invention concerns a storage device for motor vehicle trunk, comprising two partitions (5, 6) adapted to adopt: a stowed configuration wherein the two partitions (5, 6) extend along two adjacent vertical support walls (3, 4) of the trunk, and an extended configuration wherein the two partitions (5, 6) of the storage device and said support walls (3, 4) delimit a closed space, the partitions (5, 6) being pivotably mounted on the walls (3, 4) through one first end (5a, 6a) about vertical axes (1, 2). The invention is characterized in that a second end (5b) of the partition (5) of the device is pivotably mounted about a vertical axis of rotation (10) slidably mounted in a horizontal rail borne by the partition (6) of the device, so as to be able to vary the sum of the distance (d1) between the axes (1) and (10) and of the distance (d2) between the axes (2) and (10) when the device is shifted from one configuration to the other.
