Abstract (en)
[origin: WO2007048490A2] The invention relates to a method and a device for charging feedstock, particularly coke or ore, and optionally separated fine moieties of feedstock, to process the same in a metallurgical vessel in order to produce metal or initial metal products with the aid of a charging apparatus that is provided with a conveying means, and at least one feeding mechanism for supplying the charging apparatus. The conveying means comprises an outlet which is guided along an internally directed spiral when the vessel is charged so as to adjust a predefined cover in the vessel. Charged materials can be accurately placed in the vessel, fine moieties being evenly distributed in the circumferential zone.
