Abstract (en)
[origin: WO2007045297A1] The invention relates to a drawing system for a textile machine, comprising a carrier (2) that is configured to hold top rollers and that is mounted to pivot about a bearing axis (3) on a support (1). Said support (1) is fixed to a retaining bar (6) of the textile machine. The system is also equipped with an adjusting element (5, 11), which is used to displace the carrier (2) in relation to the retaining bar (6). The invention is characterised in that the adjusting element (5, 11) is mounted on the support (1) in such a way that it causes the position of the carrier to be modified in relation to the retaining bar (6), by altering the pivoting angle of said carrier (2), whilst the spatial position of the bearing axis (3) remains unchanged.
