Abstract (en)

[origin: WO2007045301A1] The invention relates to a support (1), which is designed to receive a carrier for the top rollers of a drawing system and which can be fixed to at least one retaining bar on a machine frame of a textile machine. Said support (1) has an essentially U-shaped contour, formed by an end face (3) and parallel lateral walls (2) that extend perpendicularly to the end face (3). For stability, the support (1) comprises angled sections (5, 6) that run perpendicularly to the end face (3) and the lateral walls (2) and are interconnected in a positive fit. The three-dimensional form of the support (1) is produced by a bending process.
