Abstract (en)

[origin: WO2007045542A1] A method for operation of an internal combustion engine (10), comprising an exhaust treatment device (16) in the exhaust system (13) thereof, with application of a reagent under given operating conditions of the internal combustion engine (10) and/or the exhaust treatment device (16) and a device for carrying out the method are disclosed, wherein a correction parameter ( $t_i$  Korr,  $m$  Korr) is determined for a reagent signal ( $S_{Rea}$ ), describing the amount of reagent to be introduced into the exhaust system (13) and the correction parameter ( $t_i$  Korr,  $m$  Korr) is determined by means of a comparison of a measure ( $m_{Ist}$ ) of the actual amount of the reagent in the exhaust system (13), which should be introduced based on a measure ( $m_{Soll}$ ) of a pre-determined set amount and the measure ( $m_{Soll}$ ) of the set amount. The above method permits a particularly exact maintenance of the amount of reagent introduced into the exhaust system (13) in accordance with the pre-determined measure ( $m_{Soll}$ ) for the set amount.
