Abstract (en)

[origin: WO2007045768A1] The invention relates to a circuit for supplying an internal combustion engine, particularly a diesel engine, with at least one fluid. The invention consists of: a circuit for supercharging air (20) at the intake of the engine, which is equipped with a supercharging pipe (36), a supercharging device (28) comprising a compression stage (26) and a radiator (38) for cooling the compressed air; and a circuit for recirculating the exhaust gases (22) at the intake of the engine, comprising an exhaust gas recirculation pipe (40) and an exhaust gas cooler (46). According to the invention, the supply circuit comprises a connecting line (50) which is used to connect the air supercharging circuit (20) and the exhaust gas recirculation circuit (22) upstream of the cooler (46).
