Abstract (en)  
 [origin: WO2007044590A2] A user may subscribe to a content feed group that includes a set of content feeds. The content feed group includes a first set of content items from the set of included content feeds. The content items are presented in response to a subscription to the content feed group. After a change to a content feed group, such as an addition or a removal of a content feed from the set, a second set of content items, reflecting the changed set of content feeds, are presented. In addition, a label may be applied to one or more content items by a user or in accordance with predefined criteria, rules, or filters. The labeled content items are associated with a secondary feed associated with the label. Other users may subscribe to the secondary feed and be presented with the labeled content items. The label may be system-defined or user defined.
