Abstract (en)
[origin: WO2007042433A1] The invention relates to an infrastructure-assisted system for charging tolls using an on-board unit that is integrated into a vehicle. In said system, at least one sub-function of the tamper-proof on-board unit is located in another unit, which is in turn connected to the tamper-proof on-board unit that comprises the core functions via an interface, and which communicates with the on-board unit by means of a preferably standardised message directory.
