Abstract (en)
[origin: WO2007042533A1] The invention concerns a method for reducing factory customizing time in a smart card (CP_n), wherein a pre-customizing manager (GM) into a customizing machine loads post-customizing data (AP, OP₁-OP_l, DOP₁-DOP_l) in the smart card. Then a post-customizing application (AP) included in the smart card is enabled after delivery of the card to a user following a connection of the smart card to a terminal to process the loaded post-customizing data so as to make the smart card operational.
