Abstract (en)
[origin: FR2891668A1] The sleeve has two bodies (2, 3), each being flexible in shape. Each body is curved with a free longitudinal edge (7, 8) that is at a distance from another free longitudinal edge (9, 10). The body (3) bends with the distance that increases and then decreases to receive the body (2) during a passage of the sleeve from an open position to a stable closed position. The body (2) bends with the distance that increases and then decreases to receive the body (3) during the passage of the sleeve from the open position to another stable closed position.
