Abstract (en)

[origin: WO2006136181A1] A method and a device for the stereoscopic recording of objects for a three-dimensional visualization are described, which method/device is suitable in particular for the display also of oblique viewing perspectives of an object on an autostereoscopic monitor. Additional cameras are provided for recording these perspectives, which cameras are aligned/positioned relative to the targeted object by the inventive processing of the recorded image data.
