Abstract (en)
[origin: EP1941973A2] The device has a contactlessly working switching device (33) for switching-on and switching-off a current feed to a driving motor, where the switching device is switchable by an actuation section (34) that takes place by the movement of a driving shaft. The switching device is situated in a front position of the shaft in the switch-off condition preventing the feed to the motor, and in a rear position of the shaft in the switch-on condition permitting the feed to the motor. The device (33) is provided rearwards in front of an output shaft (10) in an axial direction.
